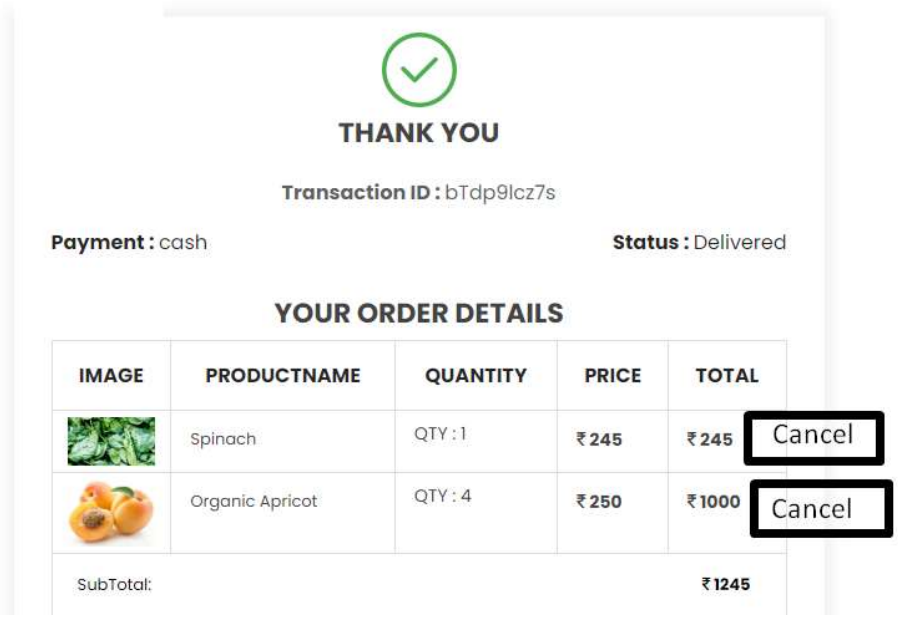
Agamorg

Return flow

How to cancel my order?

1. Order is successfully completed by the end user.
2. If they think to cancel the order. Need to go to the “my order” page.
3. In the list of orders, the order success icon shows in the first column. Click the icon that redirects to the order detail page.
4. The order detail page shows all the ordered products with the cancel button.
5. If the business partner assigned a product to the farmer, outside farmer, or garden material. The cancel button will not be shown.
6. If an ordered product is cancelled by the end user, the cancelled product will not be shown to the business partner.
7. If the end user tries to cancel the ordered product, we need to show the popup with some required details. The required details are name, bank account number, and IFSC code. This popup needs to show only for the end user who ordered products by online payment.
8. All the cancelled products need to be reflected in the invoice.



How to return my order?

1. Order is delivered successfully by agamorg partner.
2. Order details and status shows in the “My Order” page.

3. In the list of orders, the “return request” button shows in the last column.
4. The “return request” button only shows for two days from the order delivered date.
5. Click the “return request” button, need to show the popup box with a “reason for the return” field.
6. After submitting the “reason for the return” popup, status changes to “return requested”.
7. Return requested details sent to admin. Admin verify the return order and they will decide whether to accept or reject the return request.
8. If the admin accepts the return request, the status changes from “return requested” to “return accepted” in the customer app.
9. Click the “return accepted” button, and the page redirects to the order detail page.
10. In the order detail page, the “return and refund” button shows for each product.
11. After clicking the “return and refund” button, we need to show the popup with some required details. The required details are name, bank account number, and IFSC code. This popup needs to show only for the end user who ordered products by online payment.
12. Return order and refund accepted status need to show in the order details page.
13. If the admin rejects the return request, the status changes from “return requested” to “return rejected” in the customer app. Then the customer won't be able to return the order.

How does the return process work?

1. After submitting a return and refund order in the customer app.
2. The return order assigned to the business partner.
3. The business partner updates the order status and is assigned to the respective service partner.
4. Then the service partner delivered the return order to the respective farmer, outside farmer or garden material.
5. After accepting the return order, then the refund process is completed by the admin manually .
